Goal	solve user problems	create engaging interfaces
Tools	wireframes, persona, user journey maps.	visual mockups. design system
O/P	structure, logic, satisfaction	layouts, graphics interactions
Designer Role	psychologist, strategist	Artist & stylist

what is search everywhere optimization

- showing everywhere where your customers are making decisions.
- it's not about volume it's about strategic presence.
- 73% of searches happening outside google.

Every platform has its own playbook

- Tiktok :- Desires are driven by emotions and novelty.
- Youtube :- It's about retention & perceived expertise.
- chatgpt :- citations and semantic clarity.
- amazon :- pure social proof and trust.
- Insta :- aspirational identity.
- Reddit :- Raw authenticity.

platform specific strategy not just platform specific posting.

Visibility isn't enough you need validation

visibility = success.
visibility showing up in search engine
validation getting mention.
visibility what you do
validation what others say about what you do.

you don't have to be everywhere

RICE Framework.
Reach, Impact, confidence, Ease.

SEO starts working for you instead of you working for SEO.

- consumers aren't searching anymore at least not the way you think. They are deciding.
- new decision making models.
- Google Trap :- Most players playing google game ie ended 3 years ago. chasing for page No1 Rank. Even you are winning at google you are still loosing customers.

13.7 Billion searches everyday, 27% of all search happening in internet.

you are optimising for visibility in one place. while customer is deciding everywhere else.

Result :- your traffic may look descent for conversion flat.

you are showing up at search & missing decision.

- people aren't searching they are deciding :-

consumer behavior is fundamentally shifted.

Decision making happening at different places.

Modern customer journey isn't funnel shape anymore.

it's collection of micro decisions.

what	click	Trust	Buy	Try	Think Believe
		google Redit.	Amazon	Google play	youtube chatgpt podcast clubhouse

instagram

Each platform serves different psychological function in the decision making process. These are not sequential steps. They are happening simultaneously. you are not showing up at this micro choices.

Web design

- Usability professional. - Bad news
- Its not Rocket science - good news.
- If its short its more like to actually be used.

different attributes of usability

- Useful :- does it do something people need done ?.
- Learnable :- can people figure out how to use it ?.
- Memorable :- Do they have to relearn it each time they use it ?.
- Effective :- Does it get the job done ?.
- Efficient :- Does it do with reasonable amt of time and effort ?.
- Desirable :- Do people want it.
- Delightful :- Is using it enjoyable ?.

A person of avg (or even below avg) ability and experience can figure out how to use thing to accomplish something

① Dont Make me think. (KRUG's First law of usability).

* self evident * self explanatory

Boston Ny New york. Bos. Airport website.

on the internet, the competition is always one click away so if you frustrate users they will head somewhere else

② How we really use the web.

scanning, satisficing & muddling through.

* How we think people use the website and how they actually use them.

* we dont read pages, we scan them.
  * we are usually on a mission
  * we know we dont need to read everything.
  * we are good at it

"what we see when we look at page depends on
we have in mind, and it's usually just a fraction
of what's there".

we don't read instructions. why?

(1) It's not important to us.
How things work is not imp as long as we can use them

(2) If we find something that works, we stick to it.
we don't to look for a betterway.

(3) Billboard design 101. Designing for scanning, not Reading.

* Take adv of conventions. :- follow existing conventions.
* create effective visual hierarchies. :- The more imp
something is, the more prominent it is.

(4) How many times you can expect users to click.
to get what they want without getting frustrated.
I think it's safe to say that users don't mind a lot
of clicks as long as each click is painless
and they have continued confidence that they are
on the right track.

(5) OMIT needless words.
The art of not writing for the web.
HAPPY talks must die
Instructions must die

(6) Street signs and Bread crumbs
Designing for navigation

Analytics & Reporting

The human factors.

- someone working at google designs the product.
- " installs google analytics on their website.
- " set up preferences & reports in google analytics.
- " use those reports to make decisions.
