MARKETING MANAGEMENT (IM345AT)

Fully Solved Previous Year Question Papers

June/July 2025 & Sept/Oct 2024 — RV College of Engineering, IV Sem B.E.

This document answers every question in both papers — all of Part A, and all of Part B including the compulsory Q2 AND both alternatives of every OR pair (Q3/4, Q5/6, Q7/8, Q9/10) — so you are exam-ready regardless of which option you choose on the day. Diagrams are included wherever they aid explanation.

Tip: Answer length is matched to marks: 2-mark answers are crisp 2–4 line points; 8-mark (and 10-mark) answers are structured with headings/points and, where useful, a labelled diagram — mirroring how you should write in the exam.

IV Semester BE Regular/Supplementary Examinations June/July - 2025.
Industrial Engineering and Management
Course : Marketing Management-IM345AT

Time : 3 Hours **Maximum Marks : 100**

Instructions to the students

1. Answer all questions from Part A. Part A questions should be answered in first three pages of the answer book only.
2. Answer FIVE full questions from Part B. In Part B question number 2 is compulsory. Answer any one full question from 3 and 4, 5 and 6, 7 and 8, 9 and 10.

Part A

Question No	Question	M	CO	BT
1.1	Differentiate between push and pull marketing.	02	2	2
1.2	Mention any four characteristics of a good content.	02	1	1
1.3	What is the primary goal of social media marketing?	02	1	1
1.4	What is the primary objective of Search Engine Optimization (SEO)?	02	1	2
1.5	How bounce rate affects website performance assessment.	02	2	2
1.6	Why is segmentation important in e-mail marketing campaigns?	02	2	2
1.7	Why is it important to integrate SEO in website development?	02	4	2
1.8	What is the role of geo-targeting in mobile marketing?	02	2	2
1.9	Why is the 'Satisfaction' component important in the AIDAS model?	02	2	1
1.10	What is meant by the “end-to-end customer experience” in digital analytics?	02	3	2

Part B

Question No	Question	M	CO	BT
2a	Discuss how website analysis contributes to enhanced customer experience and conversion optimization.	08	2	3
2b	Explain how content research tools help marketers discover new opportunities and gain a competitive edge.	08	2	3

3a	Analyse how businesses can utilize Facebook and Instagram for different stages of a marketing funnel.	08	2	3
3b	Develop an SEO content plan for an e-commerce startup targeting eco-friendly household products.	08	2	3
	OR			
4a	llustrate how social media analytics contribute to creating audience profiles.	08	3	3
4b	Construct a targeted marketing plan using SEO tools like Google Analytics and SEMrush for a B2B company.	08	3	4
5a	Design a simple marketing plan for an e-learning platform using insights gathered from web analytics tools.	08	3	4
5b	Analyze a failed e-mail marketing campaign and identify areas where marketing research could have improved outcomes.	08	3	3
	OR			
6a	Evaluate the effectiveness of responsive email design in maintaining a competitive edge in digital marketing.	08	4	4
6b	Critically evaluate the contribution of Google Tag Manager in optimizing marketing channels for global companies.	08	4	3
7a	Demonstrate how tools like Google Analytics and Hotjar can be used to develop insights into user behavior and improve marketing decisions.	08	3	3
7b	Formulate a mobile-based marketing plan for a local food delivery startup to reach a targeted student segment.	08	3	3
	OR			
8a	Evaluate the effectiveness of mobile marketing in facing market changes due to rapid technological advancements.	08	2	4
8b	Create a strategy to use new digital channels like mobile apps, chatbots, and social media integration to strengthen a brand's global online presence.	08	4	4
9a	What are the key performance indicators (KPIs) used to evaluate website optimization, and how do they contribute to increased conversions?	08	4	3
9b	Analyze how market segmentation can be refined using digital analytics data.	08	3	3
	OR			
10a	Design a basic digital dashboard that reflects holistic marketing performance.	08	2	4
10b	Analyze how a company can use the AIDAS model to structure content on its product landing page.	08	3	3

PAPER 1 — June/July 2025 (Regular/Supplementary)

Part A (10 × 2 = 20 Marks)

Q.No	Question (2 Marks)	Answer
1.1	Differentiate between push and pull marketing.	Push marketing: the producer actively pushes the product through the channel to the consumer using trade promotions, personal selling, and advertising to intermediaries — the initiative starts with the seller. Pull marketing: the company builds strong consumer demand/brand pull (advertising, promotions, loyalty) so consumers actively seek the product, 'pulling' it through the channel.
1.2	Mention any four characteristics of a good content.	(1) Relevant to the target audience, (2) Credible/trustworthy, (3) Shareable, (4) Useful or valuable (solves a problem or entertains). (Also on-brand and different from competitor content.)
1.3	What is the primary goal of social media marketing?	To build brand awareness and engage the target audience directly on the platforms they use, ultimately nurturing relationships that drive traffic, leads and sales.
1.4	What is the primary objective of SEO?	To improve a website's visibility/ranking in organic (unpaid) search engine results so that it attracts qualified, relevant organic traffic.
1.5	How bounce rate affects website performance assessment.	A high bounce rate signals that visitors are leaving after viewing only one page — indicating poor content relevance, weak UX, slow load time or a landing-page/keyword mismatch. It lowers perceived engagement, can hurt SEO signals, and points to pages needing optimization; a low bounce rate suggests visitors find the content relevant and are exploring further.
1.6	Why is segmentation important in e-mail marketing campaigns?	Segmentation groups subscribers by demographics, behaviour or purchase history so each group receives more relevant, personalized content. This increases open and click-through rates, reduces unsubscribes, and improves overall campaign ROI compared to a single generic blast.
1.7	Why is it important to integrate SEO in website development?	Building SEO in from the start (clean URL structure, fast load speed, mobile responsiveness, crawlable code, proper heading tags) ensures the site is discoverable and rankable from launch, avoiding costly retrofits later and giving the business organic visibility sooner.
1.8	What is the role of geo-targeting in mobile marketing?	Geo-targeting uses a user's location (GPS/IP) to deliver location-relevant ads, offers or notifications — e.g., a discount when a customer is near a store. It increases message relevance, drives foot traffic, and personalizes the mobile experience.
1.9	Why is the 'Satisfaction' component important in the AIDAS model?	Satisfaction is the post-purchase stage — it confirms the product/experience met expectations. Without it, customers won't repurchase, leave positive reviews or refer others; it converts a one-time buyer into a

Q.No	Question (2 Marks)	Answer
		loyal, repeat customer and brand advocate, completing the customer journey.
1.10	What is meant by 'end-to-end customer experience' in digital analytics?	It means tracking and analyzing a customer's complete journey across every touchpoint and channel — from first awareness, through consideration and purchase, to post-purchase/support — rather than looking at isolated website metrics, to understand and optimize the whole experience holistically.

Part B

Q2(a). Discuss how website analysis contributes to enhanced customer experience and conversion optimization. *[8 Marks]*

Website analysis is the process of auditing a site's performance, usability and analytics data to find friction points and opportunities. It contributes to customer experience (CX) and conversion optimization in the following ways:

- **Identifying usability issues:** audits (navigation, load speed, mobile-friendliness, broken links) reveal what frustrates visitors, so fixes directly improve CX.
- **Behavioural insight:** analytics data — bounce rate, session duration, funnel drop-off, heatmaps/session recordings — shows exactly where users struggle or lose interest.
- **Content & journey alignment:** analysis reveals whether page content matches visitor intent (keyword/landing-page match), improving relevance and satisfaction.
- **A/B testing:** insights from analysis feed hypotheses for testing CTAs, layouts, and copy, iteratively raising the conversion rate.
- **Personalization:** segment-level analysis (new vs returning, device, source) allows tailored experiences that convert better.
- **Continuous improvement loop:** website analysis is not one-time — regular audits let a business keep pace with changing user behaviour and technology.

In short: Website Analysis → Actionable Insight → Targeted Optimization → Better CX → Higher Conversion Rate.

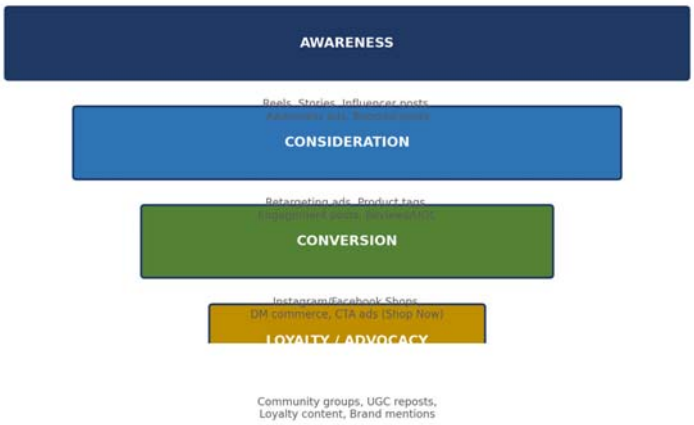

Q2(b). Explain how content research tools help marketers discover new opportunities and gain a competitive edge. *[8 Marks]*

Content research tools (Google Keyword Planner, SEMrush, Ahrefs, AnswerThePublic, BuzzSumo, Google Trends) analyze search demand, competitor content and audience questions. They help marketers in several ways:

- **Keyword & topic gap analysis:** reveal high-demand keywords/topics competitors rank for but the business hasn't covered — direct content opportunities.
- **Search intent discovery:** tools like AnswerThePublic surface the actual questions the audience is asking, so content answers real needs.
- **Competitor content audit:** BuzzSumo/Ahrefs show which competitor content performs best (shares, backlinks), guiding what formats/topics to create or improve upon.
- **Trend spotting:** Google Trends identifies rising topics early, letting a brand publish before competitors and capture first-mover search traffic.
- **Data-driven prioritization:** search volume and difficulty scores help prioritize which content to produce first for the best ROI.

Together these tools convert guesswork into a data-backed content plan — filling gaps competitors have missed and building topical authority faster, which is a genuine competitive edge in organic search.

Q3(a). Analyse how businesses can utilize Facebook and Instagram for different stages of a marketing funnel. *[8 Marks]*

- **Awareness stage:** Reels, Stories, influencer collaborations and boosted/awareness ad objectives introduce the brand to a wide, interest-targeted audience.
- **Consideration stage:** retargeting ads to people who engaged/visited, Instagram product tagging/catalogs, engagement posts, and reviews/UGC build trust and interest.
- **Conversion stage:** Facebook/Instagram Shops, 'Shop Now'/CTA ads, DM-based commerce and simplified checkout convert interest into purchase.
- **Loyalty/Advocacy stage:** private community groups, resharing user-generated content, and loyalty/behind-the-scenes content turn buyers into repeat customers and brand advocates.

This shows both platforms can serve the entire funnel, not just top-of-funnel awareness, if the ad objective and content format are matched to each stage.

Q3(b). Develop an SEO content plan for an e-commerce startup targeting eco-friendly household products. *[8 Marks]*

- **1. Keyword research:** target terms like 'eco-friendly cleaning products', 'sustainable kitchenware', 'biodegradable household items', including long-tail buyer-intent keywords.
- **2. Competitor & gap analysis:** use SEMrush/Ahrefs to see what sustainability-focused competitors rank for and identify uncovered topics.
- **3. Site structure:** organize category/pillar pages (e.g., 'Eco Kitchen', 'Eco Cleaning') with supporting cluster blog content linking back — supports both users and search engines.
- **4. Content pillars:** buying guides, sustainability impact articles ('how switching to X reduces plastic waste'), product comparisons, and how-to/DIY content.
- **5. On-page optimization:** optimized title tags, meta descriptions, product descriptions with keywords, alt text for images, schema markup for products/reviews.
- **6. Off-page SEO:** guest posts and backlinks from sustainability/lifestyle blogs, influencer reviews, PR around eco-certifications.
- **7. Content calendar & KPIs:** schedule monthly content; track organic traffic, keyword rankings, and conversion rate as success metrics.

— OR —

Q4(a). Illustrate how social media analytics contribute to creating audience profiles. *[8 Marks]*

Social media analytics tools (Facebook Insights, Instagram Insights, X Analytics) collect data on followers and content interactions. This data builds detailed audience profiles as follows:

- **Demographic data:** age, gender, location, and language of followers/engagers form the base profile.
- **Behavioural data:** what content type (video/image/carousel) each segment engages with, and at what time — reveals habits and preferences.
- **Interest data:** pages liked, hashtags followed, and topics engaged with reveal psychographic interests.
- **Engagement patterns:** comments, shares, and DMs reveal intent and sentiment, refining the persona beyond simple demographics.

- **Cross-platform triangulation:** combining insights across platforms with website analytics (GA) gives a fuller, more accurate persona used for targeting and content planning.

The result is a data-backed persona (not a guess) that marketers use to plan content, targeting, and messaging that better resonates with real audience segments.

Q4(b). Construct a targeted marketing plan using SEO tools like Google Analytics and SEMrush for a B2B company. *[8 Marks]*

- **1. Define the Ideal Customer Profile (ICP):** use SEMrush keyword/industry data to identify search terms used by decision-makers in the target industry.
- **2. Competitive gap analysis:** SEMrush's keyword gap and backlink analysis tools reveal topics/keywords competitors rank for that the company doesn't.
- **3. Content plan for the B2B funnel:** top-of-funnel (industry insights blogs), mid-funnel (whitepapers/case studies), bottom-funnel (product comparison/demo pages) mapped to keywords.
- **4. On-page & technical SEO:** optimize landing pages/case-study pages using SEMrush's on-page SEO checker.
- **5. Tracking with Google Analytics:** set up goals for lead-form submissions/demo requests, track acquisition channels, and build funnel visualization to see where B2B leads drop off.
- **6. Retargeting & LinkedIn integration:** use GA audiences to retarget engaged visitors, since B2B buying cycles are longer.
- **7. Measure ROI:** tie organic traffic and goal completions to pipeline value; refine keyword targeting monthly based on SEMrush rank tracking and GA conversion data.

Q5(a). Design a simple marketing plan for an e-learning platform using insights gathered from web analytics tools. *[8 Marks]*

- **1. Set goals:** increase course sign-ups/enrolments — defined as a Goal/Conversion in Google Analytics.
- **2. Analyze traffic sources:** use GA's Acquisition report to see which channels (organic, social, paid, referral) bring the most engaged users.
- **3. Segment the audience:** separate students vs working professionals using behaviour/demographic data; tailor messaging to each.
- **4. Fix funnel drop-off:** use GA funnel/behaviour-flow reports to find where users abandon the sign-up flow (e.g., at payment) and simplify that step.
- **5. Content & channel plan:** double down on the top-performing channel identified (e.g., YouTube tutorials for organic, Instagram ads for professionals).
- **6. Retarget drop-offs:** run retargeting ads to visitors who viewed a course page but didn't enrol.
- **7. Measure & iterate:** track conversion rate, cost-per-enrolment, and course-completion as KPIs, refining monthly.

Q5(b). Analyze a failed e-mail marketing campaign and identify areas where marketing research could have improved outcomes. *[8 Marks]*

Consider a promotional email campaign that had low open rates, low click-through, and high unsubscribes. Likely causes and how research could have helped:

- **Poor segmentation:** a single generic email sent to the whole list — research into subscriber segments (purchase history, interest) could have enabled targeted, relevant messaging.
- **Weak subject line:** low open rate suggests the subject line didn't resonate — A/B testing/pre-research on subject lines would have identified a stronger hook.
- **Bad timing:** sending at a time when the audience is inactive; research into audience behaviour patterns/time-zone data could optimize send time.
- **No personalization:** generic greeting/content reduces relevance; research-driven personalization (name, past purchases) improves engagement.
- **Not mobile-optimized:** if most opens happen on mobile and the design breaks, usability research/testing before sending would have caught this.
- **Unclear CTA:** if the desired action wasn't obvious, message-testing/research would have refined a single, clear call-to-action.

In summary, pre-campaign research (surveys, A/B tests, segmentation analysis, and design testing) could have prevented most of these failure points.

— OR —

Q6(a). Evaluate the effectiveness of responsive email design in maintaining a competitive edge in digital marketing. *[8 Marks]*

- **Majority of opens are on mobile:** most subscribers now open emails on smartphones, so a non-responsive email renders broken and gets deleted immediately.
- **Improves engagement:** responsive layouts (single-column, larger tap-friendly buttons) increase click-through rates versus fixed-width designs.
- **Reduces unsubscribes/spam complaints:** a poor mobile experience frustrates users and drives them to opt out, hurting sender reputation.
- **Builds brand trust:** a polished, consistent experience across devices signals professionalism, especially important when competitors' emails also compete for the same inbox attention.
- **Competitive necessity, not a luxury:** since most competitors already use responsive templates, a brand without one is at an immediate disadvantage — effectiveness is high but it is now table-stakes rather than a differentiator by itself.

Q6(b). Critically evaluate the contribution of Google Tag Manager (GTM) in optimizing marketing channels for global companies. *[8 Marks]*

- **Centralized tag management:** GTM lets marketers deploy and manage tracking tags (GA, ad pixels, conversion tags) from one dashboard without editing site code each time — faster experimentation across many regional sites.
- **Consistency across markets:** global companies can maintain uniform tracking standards across country/language versions of their site through shared or region-specific containers.
- **Faster iteration:** marketing teams can launch/adjust campaigns and tracking without waiting on developer resources — critical for large organizations running many simultaneous campaigns.
- **Performance benefit:** consolidating multiple tags reduces page bloat and improves site load speed versus hard-coding each tag separately.
- **Version control & rollback:** GTM keeps a version history, so faulty tag changes can be reverted quickly — important at global scale where errors are costly.
- **Limitations:** requires careful governance — incorrect tag configuration can silently break data collection across many markets; also raises data-privacy/compliance considerations (e.g., GDPR in the EU) that must be configured per-region via consent settings.

Overall, GTM significantly improves agility and consistency of tracking for global marketing operations, provided it is governed with proper QA and regional compliance settings.

Q7(a). Demonstrate how tools like Google Analytics and Hotjar can be used to develop insights into user behavior and improve marketing decisions. *[8 Marks]*

- **Google Analytics (quantitative):** shows WHAT is happening — traffic sources, audience demographics, behaviour flow (page-to-page paths), conversion funnels, and goal completions.
- **Hotjar (qualitative):** shows WHY it's happening — heatmaps reveal where users click/scroll, session recordings show real navigation struggles, and on-site surveys/feedback polls capture direct user opinions.
- **Combined workflow:** GA flags a page with high drop-off in the funnel → Hotjar heatmap/recordings on that exact page reveal users are missing the CTA or confused by layout → marketing team redesigns that element.
- **Better decisions:** this pairing of 'what' and 'why' data lets marketers prioritize fixes with evidence instead of guesswork, improving UX, content, and CTA placement, which raises conversion rates.

Q7(b). Formulate a mobile-based marketing plan for a local food delivery startup to reach a targeted student segment. *[8 Marks]*

- **App + push notifications:** lightweight app with push notifications for flash deals, lunchtime/late-night offers timed to student schedules.
- **Geo-targeted ads:** geofenced social/mobile ads around college campuses and hostels/PGs.
- **Platform choice:** Instagram Reels/Stories and campus-focused influencer promotions, since students are highly active there.
- **Student-specific offers:** discount codes verified via student ID/college email; combo meal deals priced for student budgets.
- **Referral program:** 'refer a friend' credits to leverage peer networks in hostels/classes.
- **Campus partnerships:** tie-ups with college fests/events for on-ground sampling plus QR-code app downloads.
- **Loyalty & gamification:** in-app rewards/points for frequent orders to build repeat usage.

— OR —

Q8(a). Evaluate the effectiveness of mobile marketing in facing market changes due to rapid technological advancements. *[8 Marks]*

- **Adaptability:** mobile marketing can integrate new capabilities quickly — 5G-enabled rich media, AR try-on filters, AI-driven personalization, and voice-search optimization — keeping campaigns current.
- **Real-time responsiveness:** push notifications and app-based triggers allow near-instant response to trends or events, an advantage over slower traditional channels.
- **Data-driven precision:** location and behavioural data allow highly targeted, timely offers, improving effectiveness versus static channels.
- **Challenges reducing effectiveness:** privacy changes (e.g., Apple's App Tracking Transparency) restrict tracking, rising CPMs increase costs, and fast-changing platform algorithms require constant strategy updates.
- **Overall evaluation:** mobile marketing remains highly effective, but only for businesses that continuously adapt — its strength is agility, but that agility must be actively maintained.

Q8(b). Create a strategy to use new digital channels like mobile apps, chatbots, and social media integration to strengthen a brand's global online presence. *[8 Marks]*

- **Localized mobile app experience:** multilingual app content, region-specific offers and payment methods for each market.
- **AI chatbots for 24/7 support:** chatbots handle customer queries across time zones instantly, improving global customer experience without proportional staffing costs.
- **Social commerce integration:** enable in-app shopping on Instagram/Facebook/WhatsApp so customers can purchase without leaving the platform, tailored per region's preferred app.
- **Consistent omnichannel branding:** uniform visual identity and tone across app, chatbot, and social channels builds global brand recognition.

- **Localized content strategy:** region-specific social content/campaigns respecting cultural nuances, run alongside a consistent global brand narrative.
- **Data-driven personalization at scale:** use app and chatbot interaction data to personalize offers per market, continuously refined via analytics.

Q9(a). What are the key performance indicators (KPIs) used to evaluate website optimization, and how do they contribute to increased conversions? *[8 Marks]*

KPI	What it reveals / contribution to conversions
Conversion rate	Direct measure of visitors completing the goal action — the core success metric
Bounce rate	High values flag irrelevant/poor landing pages that need fixing to retain visitors
Average session duration	Indicates engagement level; longer, relevant engagement often precedes conversion
Page load time	Slow pages directly increase abandonment; speeding up pages recovers lost conversions
Click-through rate (CTA/CTR)	Shows whether calls-to-action are compelling enough to move users forward
Cart/funnel abandonment rate	Pinpoints exact step where users drop off so it can be simplified

Together, these KPIs form a diagnostic chain: traffic quality → engagement → friction points → completed conversion, letting a business prioritize the highest-impact fix first, which directly raises the conversion rate.

Q9(b). Analyze how market segmentation can be refined using digital analytics data. *[8 Marks]*

- **Behavioural data:** browsing patterns, pages visited, and time spent refine broad demographic segments into behaviour-based micro-segments (e.g., 'frequent browsers, low purchase').
- **Purchase/transaction data:** e-commerce tracking reveals purchase frequency and value, enabling RFM (Recency, Frequency, Monetary) segmentation.
- **GA audience & affinity data:** built-in interest/affinity categories add psychographic depth beyond simple demographics.
- **Lookalike/predictive modelling:** platforms use existing high-value customer data to algorithmically find similar new prospects.
- **Real-time refinement:** segments can be continuously updated as new behavioural data arrives, unlike static traditional segmentation done once via surveys.

This turns segmentation from a one-time, broad exercise into a continuously refined, precise targeting system.

— OR —

Q10(a). Design a basic digital dashboard that reflects holistic marketing performance. *[8 Marks]*

A holistic dashboard should combine traffic, channel-level performance, the conversion funnel, cost/ROI metrics, engagement quality, and real-time alerts on one screen — giving marketers a single view connecting top-of-funnel activity to bottom-line business impact, rather than looking at each channel's data in isolation.

Q10(b). Analyze how a company can use the AIDAS model to structure content on its product landing page. *[8 Marks]*

- **Attention:** a bold hero headline/banner and striking visual at the very top of the page to stop the scroll.
- **Interest:** a features/benefits section just below, explaining what the product does and why it matters to the visitor.
- **Desire:** testimonials, ratings, case studies and urgency/scarcity cues (limited stock, limited-time offer) that build an emotional want.
- **Action:** a single, clear, prominent call-to-action button ('Buy Now' / 'Sign Up') placed where desire peaks, with minimal form friction.
- **Satisfaction:** post-action elements — confirmation messaging, easy support access, and follow-up emails — that reassure the buyer and encourage repeat purchase/referral.

Structuring the page in this sequence ensures each section does the specific psychological job needed to move the visitor smoothly to the next stage, rather than overwhelming them with everything at once.

RV COLLEGE OF ENGINEERING®

(An Autonomous Institution Affiliated to VTU)

IV Semester B. E. Examinations Sept/Oct – 2024

Industrial Engineering and Management

MARKETING MANAGEMENT

Time: 03 Hours ***Maximum Marks: 100***

Instructions to candidates:

1. Answer all questions from Part A. Part A questions should be answered in first three pages of the answer book only.
2. Answer FIVE full questions from Part B. In Part B question number 2 is compulsory. Answer any one full question from 3 and 4, 5 and 6, 7 and 8, 9 and 10.

PART-A

			M	BT	CO
1	1.1	Comment on the importance of demographic segmentation.	02	2	1
	1.2	Identify the 4 P's of marketing.	02	1	1
	1.3	Assume you are sitting around in the dining area in casual attire during your vacation. Your uncle who is a marketing manager himself wants to test your marketing skill and gives a pen (as a product) to sell right at that moment. How would you respond?	02	3	1
	1.4	Identify two types of research data.	02	1	1
	1.5	Provide your own Psychographic and Demographic profile when you are being assessed by any marketing personnel.	02	1	2
	1.6	Highlight one advantage and one limitation of psychographic segmentation.	02	1	2
	1.7	You want to test an app you have developed which addresses some needs of engineering college students. How can you use digital marketing to get initial quantitative feedback?	02	3	3
	1.8	List any 4 online marketing tools that can be useful for beginners in the field of marketing.	02	1	3
	1.9	Identify two key benefits of A/B testing in optimizing email marketing conversions.	02	1	4
	1.10	What is the primary difference between mobile advertising and mobile marketing?	02	2	4

PART-B

2	a	Explain any 4 key principles of digital marketing.	08	2	1
	b	Explain any 4 digital marketing channels to spread awareness about new product.	08	2	1
3	a	Develop a social media marketing campaign strategy for a local bakery looking to increase online sales.	08	4	1
	b	Explain the difference between on-site and off-site SEO.	08	2	1
		OR			
4	a	Discuss the importance of SEO in digital marketing strategies.	08	3	1
	b	Discuss the benefits and challenges of using social media for business marketing.	08	2	1

5	a	Explain the key features and functionalities of Google Analytics which can be used to track website traffic, user behaviour and conversions.	10	3	2
	b	Discuss the key elements of an effective email marketing campaign.	06	2	2
		OR			
6	a	Discuss the importance of web analytics.	10	3	2
	b	Write short notes on any two from the following: i. Bounce rate ii. Monthly unique visitors.	06	2	2
7	a	Outline the steps involved in publishing basic website for a small business.	08	2	3
	b	Discuss any 4 important website metrics.	08	2	3
		OR			
8	a	Discuss the challenges of using mobile marketing for sales and promotion.	08	3	3
	b	Elucidate the importance of understanding User centered design concepts while developing digital marketing strategies.	08	3	3
9	a	Explain the AIDAS model and its role in conversion optimization.	08	3	4
	b	Discuss the purpose of website optimization.	08	2	4
		OR			
10	a	Explain how advancements in technology, data collection methods and analytical tools have transformed the way businesses understand and optimize their online presence.	08	3	4
	b	Analyze the evolution of Digital Analytics in the last decade and predict the changes we might see in the next decade from marketing perspective.	08	4	4

PAPER 2 — Sept/Oct 2024

Part A (10 × 2 = 20 Marks)

Q.No	Question (2 Marks)	Answer
1.1	Comment on the importance of demographic segmentation.	Demographic segmentation (age, gender, income, education, occupation) lets a business tailor products, pricing and messaging to groups with similar needs, improving targeting efficiency, product-market fit, and marketing budget efficiency, since demographic data is easy to collect and measure.
1.2	Identify the 4 P's of marketing.	Product, Price, Place, and Promotion — the classic marketing mix.
1.3	Sell a pen to your uncle right now — how would you respond?	Example response: "Uncle, before you judge this as 'just a pen' — notice how smoothly it glides and how comfortable the grip feels even after writing for a while. It's reliable, never skips, and looks professional enough for any meeting. Try signing your name with it — doesn't it feel effortless? For something you'll use every single day, isn't that worth having?" — this demonstrates highlighting a benefit, letting the prospect experience it, and closing with a question.
1.4	Identify two types of research data.	Primary data (collected first-hand for the specific research purpose — surveys, interviews) and Secondary data (already existing data collected for another purpose — reports, published statistics).
1.5	Provide your own psychographic and demographic profile.	Example: Demographic — 20–22 years, undergraduate engineering student, urban resident, limited/dependent income. Psychographic — tech-savvy and early adopter, values convenience and innovation, achievement-oriented, socially active on Instagram/LinkedIn, price-conscious but willing to spend on technology/education.
1.6	One advantage and one limitation of psychographic segmentation.	Advantage: it gives deeper insight into customer motivations, values and lifestyle, enabling more emotionally resonant messaging than demographics alone. Limitation: psychographic data is harder to collect and measure objectively (based on attitudes/opinions), making it less reliable and more expensive to gather than demographic data.
1.7	How can you use digital marketing to get initial quantitative feedback for a new app?	Run small-scale targeted social media ads/surveys to the target student segment, track app analytics (installs, active users, session length), use a landing page with a sign-up counter, and distribute a short Google Forms survey via email/social — all give measurable, quantitative feedback quickly and cheaply.
1.8	List any 4 online marketing tools useful for beginners.	Canva (design), Google Analytics (website tracking), Mailchimp (email marketing), and Hootsuite/Buffer (social media scheduling). (Google Keyword Planner is another good example.)
1.9	Two key benefits of A/B testing in optimizing email marketing conversions.	(1) It identifies which subject line, content, or CTA performs better with real data, removing guesswork. (2) It leads to measurably higher open/click-through

Q.No	Question (2 Marks)	Answer
		and conversion rates over time, improving overall campaign ROI.
1.10	Primary difference between mobile advertising and mobile marketing.	Mobile advertising is a paid promotional tactic (ads shown within apps/mobile web), a subset of mobile marketing. Mobile marketing is the broader strategy covering all mobile touchpoints — SMS, push notifications, apps, location-based marketing — aimed at building an ongoing relationship with the mobile user, not just running ads.

Part B

Q2(a). Explain any 4 key principles of digital marketing. *[8 Marks]*

- **Measurability:** every click, impression and conversion can be tracked in real time, unlike most traditional media.
- **Targeting & personalization:** audiences can be segmented by demographics, behaviour, interest and location for relevant messaging.
- **Interactivity/engagement:** digital channels allow two-way communication — comments, reviews, chat — rather than one-way broadcasting.
- **Cost-effectiveness & scalability:** campaigns can start small, be tested, and scaled up based on measured ROI.

Q2(b). Explain any 4 digital marketing channels to spread awareness about a new product. *[8 Marks]*

- **Social Media Marketing:** organic posts + paid ads on Instagram/Facebook/YouTube build fast, wide awareness with visual/video content.
- **Search Engine Optimization (SEO):** ranking for relevant search terms builds sustained, long-term organic awareness.
- **Content Marketing:** blogs, videos and infographics attract an audience by offering value, building awareness while establishing credibility.
- **Influencer Marketing:** partnering with influencers exposes the new product to an already-engaged, relevant follower base quickly.

Q3(a). Develop a social media marketing campaign strategy for a local bakery looking to increase online sales. *[8 Marks]*

- **1. Goal:** increase online orders via Instagram/Facebook Shop within a defined period.
- **2. Audience & platform:** geo-targeted local audience on Instagram/Facebook (visual platforms suit bakery products).
- **3. Content:** high-quality photos/reels of fresh bakes, behind-the-scenes baking process, customer testimonials.
- **4. Promotions:** limited-time discount codes, festive/occasion-based combos, referral offers.
- **5. Influencer/UGC:** local micro-influencer collaborations and a repost-worthy hashtag contest.
- **6. Conversion path:** direct 'Order Now' link/Instagram Shop integration to reduce friction from post to purchase.
- **7. Measurement:** track reach, engagement rate, and online orders via Facebook/Instagram Insights and website analytics.

Q3(b). Explain the difference between on-site and off-site SEO. *[8 Marks]*

On-site (on-page) SEO covers everything controlled directly on the website — title tags, meta descriptions, header tags, keyword placement, internal linking, page speed, mobile-friendliness and schema markup. Off-site (off-page) SEO covers external signals that build authority and trust — backlinks from other sites, guest blogging, social shares, influencer mentions, PR, and online reviews/local citations. Both work together: on-site SEO makes a page rankable and relevant, while off-site SEO builds the authority needed to actually rank it higher.

— OR —

Q4(a). Discuss the importance of SEO in digital marketing strategies. *[8 Marks]*

- **Drives sustained organic traffic:** unlike paid ads, rankings continue delivering traffic without ongoing spend per click.
- **Cost-effective long-term:** though it takes time to build, the cost-per-visitor drops significantly over time versus paid channels.
- **Builds credibility & trust:** users tend to trust organic top results more than paid ads.
- **Improves overall UX:** technical SEO best practices (speed, mobile-friendliness) also directly improve the user experience.
- **Supports other channels:** SEO content also fuels social sharing and provides material for email/content marketing.
- **Higher ROI over time:** because clicks are 'free' once ranked, SEO typically delivers a better long-run ROI than continuously-paid channels.

Q4(b). Discuss the benefits and challenges of using social media for business marketing. *[8 Marks]*

Benefits	Challenges
Wide, low-cost reach to a large audience	Constant algorithm changes reduce organic reach unpredictably
Direct, real-time engagement with customers	Content saturation — hard to stand out
Builds brand loyalty & community	Negative feedback/complaints are publicly visible
Real-time market feedback and trend insight	Time- and resource-intensive to manage consistently
Precise, data-driven ad targeting	Difficult to prove direct ROI for purely organic efforts

Q5(a). Explain the key features and functionalities of Google Analytics which can be used to track website traffic, user behaviour and conversions. *[10 Marks]*

- **Audience reports:** demographics, interests, location, device/browser data about visitors.
- **Acquisition reports:** shows which channels (organic search, paid, social, referral, direct) bring traffic.
- **Behaviour reports:** page views, behaviour flow (path through the site), site content performance, and site speed.
- **Conversion tracking (Goals/Events):** defines and measures completion of key actions — form fills, purchases — including funnel visualization to see drop-off points.
- **E-commerce tracking:** tracks revenue, transactions, and product performance directly.
- **Real-time reports:** shows current active users and their activity live.
- **Segments & custom dashboards:** allow filtering data by specific audience segments and building tailored views for stakeholders.
- **GA4 event-based model:** the newer version tracks all interactions as flexible events, enabling richer cross-platform (app + web) behaviour analysis.

Together, these features let a business understand who is visiting, how they behave, and whether they ultimately convert — forming the evidence base for optimization decisions.

Q5(b). Discuss the key elements of an effective email marketing campaign. *[6 Marks]*

- **Permission-based, segmented list:** opt-in subscribers grouped for relevance.
- **Compelling subject line:** drives the open rate.
- **Personalization & single clear CTA:** increases relevance and click-through.
- **Mobile-responsive design:** since most opens happen on mobile devices.
- **Testing & compliance:** A/B testing plus a clear sender identity/easy unsubscribe for trust and legal compliance.

— OR —

Q6(a). Discuss the importance of web analytics. *[10 Marks]*

- **Enables data-driven decisions:** replaces guesswork with evidence about what's actually working on the site.
- **Understanding user behaviour:** reveals how visitors navigate, what they engage with, and where they drop off.
- **Measuring ROI:** connects marketing spend/channels directly to traffic and conversions, showing which channels are worth the investment.
- **Identifying opportunities & problems:** flags high-performing content to double down on, and weak pages/funnels needing fixes.
- **Optimizing UX:** behaviour and funnel data guide design/content improvements that raise satisfaction and conversions.
- **Benchmarking & goal tracking:** lets a business track progress against KPIs over time and compare against past performance or competitors.
- **Competitive advantage:** businesses that act on analytics consistently out-optimize competitors relying on intuition alone.

Q6(b). Write short notes on: (i) Bounce rate (ii) Monthly unique visitors. *[6 Marks]*

- **(i) Bounce rate:** the percentage of visits in which a user views only a single page and leaves without further interaction. A high bounce rate can indicate irrelevant content, poor UX, or a mismatch between the traffic source and page content; it is one of the key diagnostic metrics for improving landing pages.
- **(ii) Monthly unique visitors:** the total count of distinct individuals who visit the site within a calendar month, counted once regardless of how many times they returned. It measures the true reach/size of the audience over time, distinct from total visits/sessions, which can include repeat visits by the same person.

Q7(a). Outline the steps involved in publishing a basic website for a small business. *[8 Marks]*

Broadly: register a domain name and choose reliable hosting; select a platform/CMS suited to the business (e.g., WordPress, Wix, Shopify); plan the sitemap and core pages (home, about, products/services, contact); design the layout and write the content; apply basic on-page SEO (titles, meta descriptions, keywords); test the site across devices and browsers; set up Google Analytics and Search Console before/at launch; then launch and begin promoting the site through search and social channels.

Q7(b). Discuss any 4 important website metrics. *[8 Marks]*

- **Bounce rate:** % of single-page visits — signals content/landing-page relevance issues.
- **Average session duration:** how long visitors stay — indicator of engagement/content quality.
- **Conversion rate:** % of visitors completing the desired goal — the ultimate business-impact metric.
- **Page load time:** directly affects both UX and SEO ranking; slow pages increase abandonment.
- **(Also valid: Traffic source, Pages per session, New vs returning visitors.)**

— OR —

Q8(a). Discuss the challenges of using mobile marketing for sales and promotion. *[8 Marks]*

- **Small screen constraints:** limited space for messaging/creative compared to desktop or print.
- **Device/OS fragmentation:** campaigns must work across many screen sizes, OS versions and app environments.
- **Privacy regulations:** changes like Apple's App Tracking Transparency restrict tracking and personalization ability.
- **Ad fatigue/blindness:** users are bombarded with mobile ads and increasingly ignore or block them.
- **Rising costs:** high competition for mobile ad inventory increases CPC/CPM over time.
- **Cross-device attribution difficulty:** hard to track a single customer's journey accurately across multiple devices/apps.

Q8(b). Elucidate the importance of understanding user-centered design (UCD) concepts while developing digital marketing strategies. *[8 Marks]*

- **Aligns campaigns with real user needs:** UCD research (personas, journeys, usability testing) ensures landing pages/ads address actual pain points, not assumptions.
- **Reduces friction:** designing around how users actually scan and behave (per usability principles) lowers bounce rate and drop-off.
- **Improves conversion:** a page built around user goals, with a clear single CTA, converts far better than a company-centric design.
- **Builds trust and satisfaction:** an intuitive, frustration-free experience reflects positively on the brand overall.

- **Supports consistent multi-channel strategy:** understanding the user holistically ensures messaging and design stay consistent from ad-click to landing page to checkout.

Q9(a). Explain the AIDAS model and its role in conversion optimization. *[8 Marks]*

AIDAS stands for Attention, Interest, Desire, Action, and Satisfaction — the stages a prospective customer moves through before and after taking action. Attention is captured through headlines/visuals; Interest is built by highlighting relevant benefits; Desire is created through social proof, storytelling and urgency; Action is the conversion step itself (clear CTA); and Satisfaction covers the post-purchase experience that drives loyalty and repeat business.

Role in conversion optimization: AIDAS gives marketers a structured diagnostic framework — if traffic (Attention) is healthy but conversions are low, the issue likely lies in the Desire or Action stage (e.g., weak social proof or unclear CTA), letting marketers pinpoint exactly which stage of a landing page or funnel to fix, rather than optimizing blindly.

Q9(b). Discuss the purpose of website optimization. *[8 Marks]*

- **Improve user experience:** make the site easier, faster and more pleasant to use.
- **Increase conversions:** remove friction in key user flows so more visitors complete desired actions.
- **Boost search rankings:** technical optimization (speed, mobile-friendliness) directly supports SEO performance.
- **Reduce bounce rate & load time:** retains more of the traffic a business has already earned/paid for.
- **Maximize ROI on existing traffic:** rather than only acquiring more visitors, optimization extracts more value from current traffic — often the most cost-effective growth lever.

— OR —

Q10(a). Explain how advancements in technology, data collection methods and analytical tools have transformed the way businesses understand and optimize their online presence. *[8 Marks]*

- **From simple counters to behavioural analytics:** early web analytics only counted hits/page views; modern tools (GA4, Hotjar) capture full behavioural journeys, event-based interactions, and qualitative signals like heatmaps.
- **Omnichannel data collection:** businesses can now track users across web, app, social and offline touchpoints, rather than siloed single-channel data.
- **AI & machine learning:** predictive analytics, automated anomaly detection, and AI-driven personalization allow proactive rather than reactive optimization.
- **Automation & real-time dashboards:** tools like Google Tag Manager and live dashboards let marketers test and adjust campaigns instantly instead of waiting for periodic reports.
- **Big data & granular segmentation:** far larger, richer datasets allow micro-segmentation and hyper-personalization that weren't previously possible.

Together these advances shifted optimization from reactive, aggregate reporting to proactive, granular, and increasingly automated decision-making.

Q10(b). Analyze the evolution of Digital Analytics in the last decade and predict the changes we might see in the next decade from a marketing perspective. *[8 Marks]*

- **Past decade:** shift from simple page-view counting to event-based tracking (GA4), integration of AI-assisted insights, rise of omnichannel/cross-device tracking, and the beginning of a privacy-first shift (cookie deprecation, consent frameworks).

- **Next decade — predictions:** greater reliance on first-party and zero-party data as third-party cookies disappear; AI-driven autonomous/self-optimizing campaigns; unified cross-platform identity resolution; growth of voice- and visual-search analytics; and continued expansion of privacy regulation shaping how data can be collected and used.

Overall, digital analytics is evolving from descriptive reporting ('what happened') toward predictive and prescriptive, privacy-conscious, AI-assisted decision-making ('what will happen, and what should we do about it') — echoing the 'search everywhere / end-to-end customer experience' shift already visible today.

How to use this document

- Revise Part A of both papers first — these overlap heavily with the glossary in your unit-wise notes and are the fastest marks to secure.
- For Part B, since Q2 is always compulsory, make sure you can write Unit-1-related answers confidently without needing a choice.
- For each OR pair, skim both alternatives given here even though you'll only answer one in the exam — recognising the pattern across both years shows you which sub-topics repeat.
- Practice reproducing the diagrams (AIDAS, funnel, on-site/off-site SEO) freehand — a labelled diagram is quick to draw and earns easy marks in 8–10 mark answers.
